

Cernusco Lombardone

Electoral Program Administrative elections

3 - 4 October 2021

THE POINTS OF THE PROGRAM

1. Security
2. Participation 3. Solidarity
4. Sustainable development
5. Urban development and road conditions 6. School and training
7. Administration and services

identità
e futuro
NOSTRO
Cernusco

PREMISE

The Civic **Identity and Future our Cernusco** list was set up in 2015 to carry out an alternative project for our country. A list, as the name implies, aimed at defending and enhancing Identity (we have a perfectly preserved historic center and large natural areas equally preserved and protected) as an indispensable prerequisite for giving a future to our country.

Five years ago we based the campaign more on "identity" because there is no future if you don't remember the past. Now we want to focus more on the future and outline how we would like Cernusco to be in 5-10 years.

We will continue to oppose the merger with neighboring municipalities, which would make Cernusco a "periphery" by losing the services (municipality, post office ...) and control of our greenery, but we will keep what we have by improving it. We will pursue efficiency, as well as effectiveness, eliminating all types of waste and we will lead the way with the other municipalities to seize all the opportunities.

We aim, with the contribution of citizens, to make Cernusco **more alive, safer and more sustainable**.

The guiding objective is to maintain a country that is "beautiful", "livable", but above all "alive", with services that concretely help those most in need.

We are aware that the quality of life is an index of the maturity and civic sense of a population.

Cernusco is turning into a dormitory town: shops and businesses are gradually closing down. To bring Cernusco back to life we must first of all

to return to live our community, in compliance with the rules governing civil coexistence: a safer, more participatory and sustainable country. Sustainability is understood in its various dimensions: economic, social and environmental.

To ensure that meeting the needs of current generations does not compromise the quality of life and the possibilities of future generations, we are aware that the extreme climatic phenomena we are witnessing every day are bound to increase if we do not immediately change course. In this sense, even in Cernusco something can be done to switch from forms of energy linked to coal and gas to renewable sources. To **improve energy efficiency** and to encourage the use of **renewable sources**, we will focus on an Energy Community Project. We will also aim to encourage a cultural change attentive to our behaviors such as the recycling and reuse of waste and plastic and greater care for the environment to protect air, water and greenery.

We will put **the citizen** at the center of the administrative program and to make the country more liveable there will be a need for:

1. Intervention on Security

In Cernusco and in the Merano area there has been an *escalation* of thefts: petty crime is on the rise and vandalism and rudeness are increasingly frequent. In various areas of Cernusco there is a deterioration caused by continuous acts of vandalism starting from the railway station and the adjacent underpasses and then continuing in the playgrounds and municipal gardens.

Recently there have been brawls at the station, assaults and drug dealing; there is a lack of control and security in the evening and at night: there are children who play basketball drunk until late at night (eg. Area beyond the state road).

Security is very important to us: we want citizens to feel safer in their homes, in their country, on the roads.

Giving security means being available to citizens, hearing their problems and helping to solve them; it means wandering through the streets of the town and watching over the bad guys who sometimes pass through the town, improving relations between citizens through events that promote socialization and mutual aid.

We at IFNC have always been convinced that video surveillance needs to be intensified e create a coordination of supra-municipal law enforcement agencies.

The Local Police has the task of guaranteeing, in collaboration with the other law enforcement agencies, greater safety for citizens in the municipal area.

We will work so that our Local Police can stay more on the street at the service of the citizen and less in the office at the service of the bureaucracy.

The role of the PL cannot be exclusively of "repression and control", but also and above all of "prevention", through close collaboration with citizens for better viability and liveability. We will work more to prevent infringements than to punish them and we will use the proceeds of the parking fines in services useful to the community.

We intend to activate the **Civil Protection Project**: during the pandemic some operations such as the distribution of masks, the cleaning of the cemetery, and the garrison during religious services were entrusted to Alpini and groups of volunteers.

We think that having organized, authorized and affiliated support in the country would make all these operations much more streamlined and safer both for the protection of the volunteers themselves and of citizens.

With the 'Civil Protection Project' we intend to extend the concept of solidarity also to those voluntary organizations that can guarantee safety to the population both in the event of natural events and disasters and as support for public order activities.

This is why we plan to agree with the recently established Cernusco Civil Protection unit: a local section, which is already present in the municipal area, in any case headed by a more solid organization at the provincial level, in order to have an adequate and reactive structure in the 'deal with emergencies. The PC would have more

ability to intervene even in non-emergency contexts: let's think about public order in events, where now we rely on the availability of the Alpini group.

Safety is also encouraged by more urban decorum with cleaning and arrangement of public parks, care of traffic especially pedestrian, favoring the protection of the territory with the use of new technologies both for the safety of public spaces and for the safety of the person with installing multiple defibrillators.

To counter the evening / night disturbance of public establishments overlooking residential areas, we will add specific rules in the PGT.

2. Encourage participation _

A precious and irreplaceable asset of our country are undoubtedly the associations in which many volunteers work every day. Identità e Futuro strongly believes in the world of associations and in the participation of citizens in the life of the country as an engine to revive the country.

The Municipality could never offer the same services with its own strength and certainly not with the same level of quality without the associations. We are therefore very grateful to the Associations operating in Cernusco and we are committed to supporting and enhancing them.

Precisely for this reason we think that it is necessary to overcome the current disconnect between the associations by creating a control room that coordinates the actions, initiatives and calendars of the various realities present both in the municipal and supra-municipal territory. It could be useful both to avoid the overlapping of initiatives and to avoid wasting those positive energies that the world of associations puts in place. We will also encourage collaborations and synergies between associations and schools.

We will identify the control room in a Council of the Associations and in a Managing Director of reference to harmonize the immense value that Cernusco has at its disposal, also providing the Associations with adequate offices and spaces and the free posting in the municipal notice boards.

Furthermore, the involvement of the Cernuschesi in the choices for the country is important to us: for this reason we want to encourage the participation of citizens on the most relevant issues, institutionalizing forms of popular consultation with the organization by the Municipal Administration of "open day "for presentation and discussion on the topic.

We will enhance the information and communication channels such as the municipal website, external information panels, *smartphone apps* with which to send reports to offices, the transmission of municipal councils via *streaming*. We will also make use of **the participatory budget**: a form of direct citizen participation by assigning a share of the Municipality budget to enhance projects for the community and chosen by the community itself.

To establish a constant relationship with the entire population, we will periodically go to the different districts for "a coffee with the council"._____

Active participation in the territory: **Cernusco "salt" of the Merano area.**

At the supra-municipal level, for social and health services we will take action to defend the services offered by the hospital in Merate and to maintain the welfare and educational services managed up to now with Retesalute.

On the environmental front, preserve and expand the membership of the Montevecchia and Valle del Curone Regional Park; defend and implement rail transport, also providing forms of sustainable public transport that connect the station and the hospital.

3. Inspire our commitment to Solidarity and Personal Services

Solidarity is a spontaneous attitude of the individual that manifests itself with generosity, brotherhood, altruism. It is a free effort aimed at meeting the needs and inconveniences of others: it is a civic virtue as Pope Francis defined it. Also art. 2 of the Italian Constitution reminds us that solidarity is a key principle-value for our sociality. IFNC believes in the family as a fundamental constitutive element of our civil society and therefore we want to focus our program on what the Administration can do in support of the person and the family.

The first nucleus where solidarity can be experienced is the family: "The family is the cell of Society" and the various families create a network of relationships among themselves. To try to make the meshes of this network less wide, personal services are activated.

Also due to the recent pandemic we are facing not only a health emergency, but also a social emergency. People who lose their jobs, shops and businesses shops closing.

More and more families in difficulty who need food aid and help to pay the rent.

All without forgetting other needs already present in our society. We refer to mistreatment, addictions, immigration, mental illness.

We must think of services that put the family and the person at the center to innovate in the name of continuity: continuity because Cernusco has always been a solidarity country, just think of the numerous missionaries, volunteers and associations present and continuity with existing services.

The Municipality of Cernusco Lombardone certainly cannot replace the State but we intend to help, protect and support the person with the means available.

It is common knowledge that a person's life can be divided into 4 seasons:

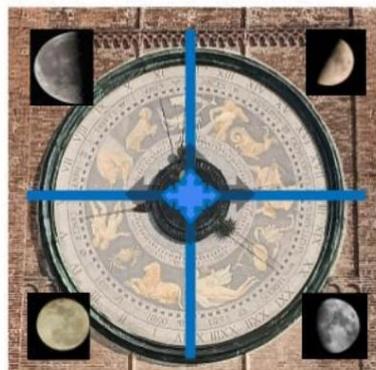

Le stagioni dell'uomo

Dalla tradizione indiana

(Card. Ravasi)

- **La stagione degli inizi**
Crescita / Educazione / Imparare dagli altri
- **La stagione della costruzione del proprio futuro**
Formazione personale (intellettuale e civica)
- **La stagione dell'età adulta**
Responsabilità e competenza /
Testimonianza ed esempio
- **La stagione del mendicante**
Sagezza e riflessione, ma anche bisogno di aiuto

we propose for

1) Phase of growth and education, in which one must learn from others

Sport Project:

- Incentives for families to protect the right to sport of children and young people, on municipal area

Addiction prevention project: •

Prevention of drug use, pathological addiction to *social* media and the Internet, Ludopathy.

The best form of prevention is to inform with theatrical performances, with professional companies that deal with these topics that attract the attention of pre and adolescent young people.

Solidarity day project:

- We involve school children.

2) Phase of building one's own future and personal preparation Youth Project: •

Student to Student: a university student is ready to help one with their study and homework.

In exchange, for this service to the community, the university student receives shopping vouchers for his or her family. The secondary school student's family will not have to spend any more money on study.

3) Stage of adulthood, responsibility and competence. Witness and teach others.

Active Citizenship Project:

- Social counter / job counter to help citizens in their requests to institutions
persons in charge of the PA
- "Punto Informatico" desk run by volunteers to solve IT problems
for people not yet digitized as the SPID tool.
- Establishment of a Civic Volunteer Register.
- Promotion of a series of meetings in which well-defined professional figures can
help people reflect on abuse in the family.

Work desk 1. The

first point of this project is closely linked to the period we are experiencing and to what will come after the pandemic. It is clear to everyone that many families are in difficulty due to the lack of work and therefore of the income they were counting on to make ends meet.

Acting as an intermediary between citizens and higher bodies in charge such as state, regions and province, to obtain for example the citizenship income, the emergency income, the school dowry or the compilation of the 730 form, can be a first step in the direction of support for these realities.

2. The second point of the Active Citizenship project arises from the observation of how this period has highlighted how technology can help us in many ways.

The problem in this case consists precisely in trying to bridge that "digital gap" linked both to economic conditions, but also to the social and generational level. The 'Punto Informatico' desk has precisely this objective, we think of it as a place where volunteers can make their IT skills available to the population to try to fill this "digital illiteracy".

3. The third proposal consists in **setting up a register of volunteers**, that is a register where to insert the skills available to the population such as digital, agricultural and social assistance skills.
4. The fourth proposal consists in organizing a series of meetings in which well-defined professional figures, for example psychotherapists or educators, who can make their skills available to help people reflect on abuse in the family, given the continuous cases increase in our territory.

4) Phase of experience and begging, understood as needing others.

This is the period of life in which wisdom has accumulated, but which very often also translates into a need for help and support.

We will enhance the activities and skills of retired but still active and active people.

We would like to encourage meetings between generations to enhance the exchange of experiences and keep our traditions alive, without neglecting those who need help.

For this reason we have thought of the "Aid Project", in which we will affect some aspects related to the assistance and enhancement of intergenerational exchanges.

o **Help Project:**

- Direct supplements for the elderly from Cernusca hospitalized in a nursing home, also as a support to the families of reference.
- In the welfare field we plan to provide a discounted rate on the TARI for whom has a non self-sufficient person in the house.
- Promote meetings for socialization, integration with practical activities between intergenerational groups to enhance and encourage the exchange of experiences and the maintenance of traditions, for example the elderly who tell their experience in schools.

Bringing support to people in difficulty in our municipality, support also intended as companionship

- Visit grandparents (even those of others),
- Bring Christmas greetings to the elderly and visit their meeting places,
- Organize days where our kids can volunteer at the centers for the disabled in our area,
- Get them to raise funds for associations in the municipal area they take care of the most needy.

Solidarietà e Servizi Sociali – Progetti

Progetto Solidarietà per l'Inclusione Sociale

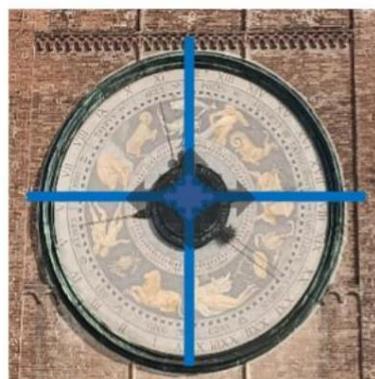

Si concretizza come sostegno all'affitto e al pagamento delle utenze.
Alimentato da fondi propri del comune oltre che da sponsor privati ed erogazioni dello stato

Progetto diritto alla casa

Assegnazione degli immobili comunali

Progetto Protezione Civile

Sostegno alla costituzione di un nucleo di Protezione Civile Locale

o **Solidarity Project for Social Inclusion** It takes the form of support for renting and paying for utilities.

Powered by the municipality's own funds as well as by private sponsors and state grants

The 'Solidarity for Social Inclusion' project consists in continuing, but innovating it with the entry of the municipality's own funds, as well as with state and private funds, the experience of the Municipal Solidarity Fund even after the experience COVID-19.

With this project we intend to create real social solidarity by supporting the payment of rent and utilities to the most disadvantaged families through special calls.

Thinking about supporting families, it comes by itself to arrive at the 'Right to Housing Project'.

o **Right to housing project**

Assignment of municipal buildings.

What we would like to do is start first from a census of all municipal properties so that, once their availability has been verified, they can be redeveloped and then assigned. We will also carry out a mapping of the gardens to rationalize the allocation.

As Identity and Future we also have a dream in the

drawer . Last but not least, there remains the project of a Home Hotel or Mini Housing for the Elderly. A very "felt" initiative in the country. It is a dream in the drawer that, at the moment, remains such, as, today, there are no economic and logistical conditions to be able to achieve it. But it is always in our hearts and minds. If we should have the opportunity to manage and at the same time the favorable circumstances occur, we will strive to crown and execute this dream in the best possible way.

We will be attentive and vigilant.

4. Focus on sustainable development, protection of the territory and of the Environment

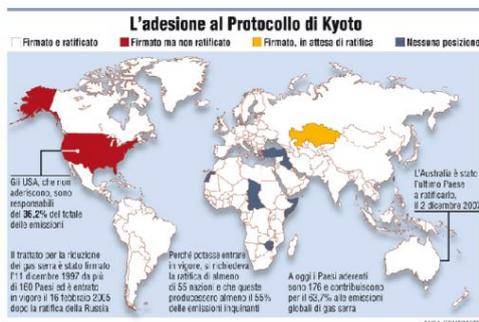

To ensure that meeting the needs of current generations does not compromise the quality of life and the possibilities of future generations, we are aware that the extreme climatic phenomena we are witnessing every day are destined to increase if we do not immediately change course. In this sense, even in Cernusco something can be done to switch from forms of energy linked to coal and gas to renewable sources. To **improve energy efficiency** and to encourage the use of **renewable sources**, we will focus on an Energy Community Project. We will also aim to encourage a cultural change attentive to our behaviors such as the recycling and reuse of waste and plastic and greater care for the environment to protect air, water and greenery.

Those convicted of minor offenses and the beneficiaries of citizenship income will be able to carry out activities in favor of the community.

Environmental protection activities, minor maintenance and other works that translate into a double opportunity: for the people involved and for the territory.

"Public utility works" allow those who have committed crimes to transform the sentence into a commitment to the community and to those who receive the citizenship income of

give back through work what they receive.

The municipal administration takes the opportunity provided by the regulations in force to exploit it to its own advantage and to offer an option to the people who find themselves in these situations, transforming their commitment into human capital to be put at the service of the community.

Specifically, the Municipality will sign an agreement with the Court to welcome people sentenced to pay penalties in cases of violation of the Highway Code, drug laws and other minor offenses, who will be able to carry out an unpaid activity in favor of the community. according to defined methods and times.

To be admitted to public utility works, the accused must submit a specific request to the judge.

The positive outcome of the activity carried out determines the setting of a new hearing for the extinction of the crime or the reduction of the sentence.

Public utility works cannot take the place of punishment more than once.

Cultura ambientale

Defend air, water and greenery through:

- plant a tree for each child born.
- enhance, defend, live our park.
- safeguard the greenery of the Molgora valley.
- preside over and monitor the level of pollution and related educational measures.
- properly planting the car parking areas

• attention to the cleaning and care of the areas in which we live both in the suburbs and in the center.

And we still aim

- create a natural barrier along the state road leading to Osnago (to protect the S. Marco village).
- install more litter boxes, and dog waste.
- maintain and improve flower beds and greenery.
- promote campaigns for separate collection and introduce the withdrawal of mowing a

domicile.

- to form a mentality aimed at eco-sustainability through specific projects in schools.
- to take action to create the positioning of electric columns to recharge car.
- gradual refurbishment and enhancement of public lighting.

Energy Community Project

An energy community is a group of private citizens, Small and Medium Enterprises (SMEs), Territorial Bodies or Local Authorities who voluntarily decide to establish themselves in a legal form in order to produce and share energy collectively, benefiting from it.

The electricity of these communities will have to be produced by plants powered by renewable energy sources, such as solar energy.

The Civic List Identity and Future Nostro Cernusco will undertake during the next Administration to promote the establishment of Energy Communities through training meetings with sector specialists able to guide and help both individual citizens, Associations, Merchants and the Municipality itself in the giving life to the Energy Communities project.

As part of the development of active projects to encourage the production of energy from renewable sources, the civic list Identità e Futuro Nostro Cernusco intends to equip municipal buildings with photovoltaic systems in order to make them autonomous from an energy point of view. The projects to equip photovoltaic production plants at:

- the municipal headquarters building, in order to self-produce the energy necessary for the carrying out his public function. the shelter for
- parking bicycles at the station, in order to be able to install charging stations for pedal assisted bicycles (e-bikes). the Primary School, to complete the project conceived more
- than twenty years ago from the point of view of energy autonomy.

- the Cemetery, in order to make it autonomous in the production of electricity for the votive lamps.

The Civic Identity and Future Nostro Cernusco list will also undertake to seize all the funding opportunities in the field of renewable energy development that will be made available by the National Recovery and Resilience Plan (PNRR) which places the green revolution and transition ecological in second place among the Missions of the plan, after the Mission of Digitization, Innovation, Competitiveness, Culture and Tourism.

We close this chapter dedicated to energy with a general consideration: our ambition, our dream is to be able to make our contribution to the realization of the projects that will allow our Municipality to rise again: every initiative, every activity will need inventiveness. , courage and energy, both mental and physical.

Our wish is to contribute to making available energy sources that are the cheapest and as affordable as possible for everyone.

5. Urban development

With the active participation of citizens, we are committed to continuing to recover and preserve our beautiful historic center by preserving the territory, safeguarding the Moscoro plateau, preserving the Molgora valley and the Montevicchia and Curone Park. We are to keep industrial and commercial areas well separated and away from residential areas.

We will revitalize the country with specific projects to help traders: we will increase and rationalize parking.

We aim to reduce the traffic through our country. We will draw on funds from the National Recovery and Resilience Plan (PNRR) to invest in the protection and improvement of the environment, the territory and the waters and we will enhance and beautify the country with an enhancement of urban furniture that favors order and cleanliness. • In agreement with the Park, installation of suitable signs to facilitate the use of the Via Stoppani station car park to reach the Park on weekends (via Via Porta Molinazzo and Via Stoppani-Nibbio).

- Redevelopment of the San Dionigi area and the pavement of via Europa that connects Paravino in the center.
- Arrangement of parking and greenery of the section between Via Stoppani and Via Della Molgora di Merate.
- Overall verification of "private public use" roads with the acquisition of the streets in the residential districts that are still not cadastral and fractionated.
- Redevelopment of municipal spaces to create a multipurpose room to be allocated to civic hall.

- Requalification of the Municipal Clinic.

We will pay close attention to the management of special waste. We will encourage energy conversion and increase energy efficiency by turning to new technologies that also allow the reduction of greenhouse gases.

Viability

Traffic is one of the problems for Cernusco: the continually increasing size of traffic and often the lack of respect for the rules is making life difficult for

cernuschi. We will initiate a **revision** of the **Urban Traffic Plan** which will give way to

give solution to numerous road problems in the town including: • Evaluation of

the situation of Via S.Ambrogio with possible extension of the ZTL of Via Balbo.

- Improvement of accessibility to Via Pirovano.
- The technological adaptation of the traffic lights at the SR 342 DIR e the SP 54 to eliminate unnecessary queues in off-peak moments. •

Redevelopment of the northern section of via Spluga with the creation of pedestrian paths protected for the pharmacy and up to Viale Verdi.

- Ecosustainable redevelopment of the commercial area of via Spluga - Esselunga and with the increase of green surfaces and securing accessibility to the sector, including the former Agricultural Consortium area and Via Lurani Cernuschi.

We will activate speed deterrents where they are needed to induce motorists to be more respectful of road regulations. Thanks to the funds for the removal of architectural barriers, we will improve safety for pedestrians and to create a network of "soft mobility", we will encourage pedestrian and cycle-pedestrian paths by creating - in connection with the neighboring municipalities and especially with the Municipality of Merate - a integrated network of routes to give access to supra-municipal structures such as high school, swimming pools, police, fire brigade.

There is a breezy supra-municipal project for the continuation of the east ring road from Usmate to Lecco: we will insist and take action in all appropriate locations to arrive, with the other municipalities of the Merano area and with the province, to define a solution with the least possible impact for Cernusco.

6. School and training of young people

For the primary school we intend to carry out the extraordinary maintenance interventions that the educational institutions have repeatedly reported to us as the adaptation of the scale fire fighting.

Per la Scuola Media Consortile opereremo d'intesa con Osnago, Lomagna e Montevecchia per assicurare gli interventi straordinari richiesti per garantire la massima possibile sicurezza degli studenti e del personale docente

Garantiremo il **diritto allo studio** dei figli sostenendo con convinzione **la scuola materna "G. Ancarani"**, l'Istituto Comprensivo "**Bonfanti e Valagussa**" ed aiuteremo le famiglie più in difficoltà o con figli disabili.

Sosterremo tutte le agenzie educative che hanno come obiettivo la crescita dei figli: l'asilo nido, l'oratorio, la scuola primaria, gli scout. **Con la biblioteca** attiveremo forme per coinvolgere i preadolescenti ed incentivarli alla lettura (es. concorso "Oltre il racconto" da coordinare con la scuola).

Ripristineremo la manifestazione del "dono della propria laurea" al Comune, da parte dei neodottori, per contribuire ad arricchire la biblioteca.

Collaboreremo con le **Associazioni sportive e culturali** presenti a Cernusco e con le scuole per avvicinare sempre più i giovani alla pratica di uno sport ed attività culturali extrascolastiche.

Manterremo, valorizzeremo e potenziaremo gli impianti sportivi presenti sostenendo le associazioni del nostro paese, tenendo in adeguata considerazione l'impegno, la significativa presenza e adesione dei cernuschesi, le iniziative, le proposte e l'organizzazione di eventi. Intendiamo dare il via alla realizzazione di una nuova palestra, e favoriremo le attività sportive all'aria aperta.

7. Amministrazione e servizi

Sarà importante accanto ad un **rigore finanziario** volto soprattutto a **diminuire gli sprechi** e volto a verificare tutte le possibilità di risparmio, avvalerci dell'aiuto delle nuove tecnologie e di progetti innovativi per **migliorare l'efficienza e l'efficacia** dei servizi resi ai cittadini.

Ci adopereremo per la semplificazione di burocrazie inutili, una maggiore trasparenza dei procedimenti; l'aggiornamento e miglioramento professionale del personale.

Le istituzioni devono fare la loro parte cercando di non aumentare la pressione fiscale sui Cittadini, bensì diminuirla.
